

Cryploma

Diplomas are 100% true here

Resumes are inflated

Validating the content of resumes is expensive for the companies. Most of the companies rely on the manual verification through making phone calls and requiring a copy of transcript from the institutions to authenticate the descriptions made upon job seekers' educational and working experiences. This could be even more troublesome for companies when verifying the diplomas issued overseas. A modern and Internet-based solution should be established via a decentralized and transparent digital certifying network based on the blockchain technology. Cryploma, an integrated solution with low cost and high efficiency, will reshape our understanding of diploma issuance & verification.

Cryploma protects the truth

We help institutions to issue diplomas on the blockchain, and integrate the verification process into a single-click action for both HR and job-seekers.

- ▶ Simple and secure
- ▶ Fast and inexpensive
- ▶ Less fraud, more confidence
- ▶ More informative

Help us to encourage the good behaviors, and block the incompetent!
